# Products

Satin Fabric offered by us is ideally used in Hotel Industry and Home Textiles for designing a wide assortment of furnishing items. Main Feature of Satin is its Durability, Soft Texture, Hand Feel and long lasting nature. Satin is a type of weave that has a glossy surface and a dull back, one of three fundamental types of textile weaves along with plain weave and twill. A satin fabric tends to have a high luster due to the high number of floats on the fabric. Because of this it is used in making bed sheets. Many variations can be made of the basic satin weave including plain satin, warp satin stripe and weft satin stripe. Satin is most often made from combed cotton. It is usually constructed by floating the warp or lengthwise yarns over four filling or horizontal yarns. The long floats give the satin fabric luster. These satin fabrics are mainly used in the manufacturing of hotel bed sheets and garments.
